SUMMARY OF QUALIFICATION

- Frontend-focused Full Stack Engineer with 4+ years of experience building scalable, high-performance web applications using React.js, Next.js, TypeScript, GraphQL, Node.js, and Express.js across e-commerce and healthcare domains.
- Strong experience in developing production-grade frontend systems with reusable component architecture, SSR/SSG rendering strategies, responsive UI development, and performance optimization using modern React and Next.js ecosystems.
- Hands-on expertise in building scalable RESTful APIs and GraphQL integrations using Node.js, Express.js, Apollo Client, MongoDB, and PostgreSQL with focus on maintainability, security, and efficient data handling.
- Experienced in frontend architecture development, state management using Redux Toolkit, API integration, authentication using JWT, and scalable full-stack application design.
- Proficient in performance optimization techniques including code splitting, lazy loading, memoization, caching strategies, and rendering optimization to improve user experience and application efficiency.
- Strong experience in unit, integration, and end-to-end testing using Jest, React Testing Library (RTL), Cypress, Mocha, and Chai to ensure application reliability and code quality.
- Worked extensively in Agile/Scrum environments collaborating with cross-functional teams on production deployments, debugging, code reviews, feature delivery, and scalable application development.
- Experienced in building and maintaining enterprise-scale applications with focus on clean architecture, maintainable codebases, frontend performance, and production-ready engineering practices.

TECHNICAL EXPERTISE

Backend Technologies :	Node.js, Express.js, REST APIs, JWT Authentication, MongoDB
API & Data Integration:	GraphQL, Apollo Client, Axios, Fetch API
Performance & Architecture :	SSR, SSG, ISR, Code Splitting, Lazy Loading, Memoization, Responsive UI Development, Scalable Component Architecture
Version Control Tool	: Webpack, Vite, Visual Studio Code, GitHub Copilot, Cursor AI
Testing Frameworks :	Jest, React Testing Library (RTL), Cypress, Mocha, Chai

PROFESSIONAL EXPERIENCE

Experience in IT:

Worked as a Senior Software Engineer at **Xine Technologies Solutions**, Guntur from Jan 2025 to Jan-2026.
Worked as a Software Engineer at **Mphasis**, Pune from Sep-2024 To Dec 2024
Worked as a Software Associate at **Mphasis** (Payroll: Ants It Solutions Pvt Ltd), Pune from Jan-2022 To Sep-2024.

Education:

B. Tech (ECE)– 2018-2022
From: JNTU, KAKINADA

PROJECT DETAILS

PROJECT 2:

Project:	COSTCO
Environment:	React.js, Next.js, TypeScript, JavaScript (ES6+), Redux Toolkit, GraphQL, Apollo Client, Node.js, Express.js, MongoDB, PostgreSQL, Tailwind CSS, Jest, Mocha, Chai, Git
Role:	Frontend-Focused Full Stack Developer

Project Description:

Costco.com is a large-scale e-commerce platform supporting online shopping, product discovery, order management, and member-focused digital experiences. Contributed to scalable frontend and full-stack feature development for responsive web applications and cross-platform user experiences.

Responsibilities:

- Developed scalable frontend applications using React.js and Next.js with focus on responsive UI development, rendering optimization, and maintainable component architecture.
- Built reusable TypeScript-based UI components and frontend modules to improve scalability, consistency, and development efficiency across features.
- Integrated REST APIs and GraphQL services for dynamic product, cart, authentication, and order management workflows.
- Implemented SSR and frontend optimization strategies using Next.js to improve SEO, rendering performance, and user experience.
- Developed backend services and API integrations using Node.js and Express.js supporting full-stack application functionality.
- Worked extensively with MongoDB and PostgreSQL for schema design, CRUD operations, query optimization, and efficient data handling.
- Implemented JWT-based authentication and authorization workflows for secure user and session management.
- Applied performance optimization techniques including code splitting, lazy loading, asynchronous processing, and efficient state management.

- Built unit and integration test cases using Jest, Mocha, and Chai to maintain code reliability and backend stability.
- Collaborated with frontend, backend, and QA teams in Agile/Scrum environments for feature delivery, debugging, and production support.
- Used Git and GitHub workflows for version control, branching strategies, pull requests, and collaborative development.

PROJECT 1:

Project:	Healthgrades
Environment:	React.js, Next.js, TypeScript, JavaScript (ES6+), Redux Toolkit, GraphQL, Apollo Client, Node.js, Express.js, MongoDB, PostgreSQL, REST APIs, Tailwind CSS, Jest, Mocha, Chai, Git
Role:	Frontend-Focused Full Stack Developer

Project Description:

Healthgrades is a large-scale healthcare platform that helps users discover doctors, hospitals, healthcare providers, and treatment information through data-driven digital experiences. Contributed to scalable frontend and full-stack application development focused on performance, usability, and secure healthcare data workflows.

Responsibilities:

- Developed scalable frontend applications using React.js and Next.js with focus on responsive UI development, maintainable component architecture, and optimized rendering performance.
- Built reusable TypeScript-based frontend components and integrated dynamic healthcare workflows using REST APIs and GraphQL services.
- Implemented SSR and SSG strategies using Next.js to improve SEO, page load performance, and user experience across healthcare search and provider discovery modules.
- Developed backend services and secure API integrations using Node.js and Express.js supporting healthcare-related application functionality.
- Worked extensively with MongoDB and PostgreSQL for schema design, CRUD operations, indexing, query optimization, and efficient data management.
- Implemented JWT-based authentication, request validation, centralized error handling, and secure API communication workflows.
- Applied asynchronous programming and backend optimization techniques to improve scalability and application performance.
- Wrote unit and integration test cases using Jest, Mocha, and Chai to improve application reliability and code quality.
- Collaborated with frontend, backend, QA, and product teams in Agile/Scrum environments for feature development, debugging, deployment, and production support.
- Maintained scalable, modular, and reusable application architecture following clean coding and collaborative development best practices.
